

Operational Well Control Workshop

Duration: 1 Day **Maximum Number of Attendees:** 18

Designed for: Rigsite and office-based drilling team members in order to improve kick prevention and detection and provide the opportunity to practice well control techniques and skills in a simulator environment.

Course Overview: **Operational Well Control** is a practically orientated workshop designed to improve the well control preparedness of the drilling team.

It involves group interaction and problem solving, focussing on well control challenges specified to wells being drilled by the Client. Presentations and team based problem solving exercises are complemented by realistic practical exercises using a full sized DS5000 rig floor simulator.

Course Content: The following topics may be addressed, subject to customisation requests and tailored to specific Client requirements:

- Overview of High Pressure High Temperature (HPHT) well control
- Overview of deepwater well control
- Volumetric stripping – including practical well control scenario
- Fingerprinting practices for kick detection
- Review of Company policies and procedures – including bridging documents and well control procedures
- Simulator exercises – ballooning and supercharging
- Lessons learned from the past (Client specific and/or industry relevant)

Course Inclusions:

- Light lunch, tea/coffee and snacks each day.
- Provision of detailed technical manuals (print copy) during course.
- Welltrain certificates of attendance (documenting training topics) for each participant.

Course Options: This course can be fully customised to address specific drilling campaign requirements. Trainers can be provided to site including offshore rigs.

Course Fees: \$AU 13,750 (inc GST) - 1 day course for up to 15 participants based on delivery at our dedicated training facility in Perth. Expenses will be charged for on-site delivery. Additional fees may apply for customisation or site visits – a fully costed proposal will be provided upon request.
